Semester Project 2

Weronika Derkowska

School of technology and digital media

Design

What went well on the project - Choice of fonts and colours – fonts - based on research, colours based on research and on building excitement by using red colour and for hover states – coral colour. Good contrast and accessibility. Simple logo. Same font as in logo used in headings.

What was difficult/didn't go well on the project – I had bad time management so I didn't implement everything that was needed, that I wanted. F.ex I prepared nice transition for pictures for cards but didn't implemented it since I didn't make basic things

What would you do differently next time – time management

Technical

What went well on the project - Not much – node/npm/bootstrap/strapi setup

What was difficult/didn't go well on the project – the same as above. I didn't know how to start and got a bit stuck on it. Spend my time on watching videos on Learning platform so when I finally satteled with instalation – it was to late to make everything work. And I got stressed by some last minute situations messing with my scheudle.

What would you do differently next time – ask for help, work on my attitude if it comes for asking questions. And remember that there are no silly ones. I will need to resit it but at least I delivered something.
